

CONTROL BEFORE SCALE. PROOF BEFORE TRUST.

PALMERAI

PalmerAI helps teams make document-heavy and approval-sensitive AI workflows more reviewable, controlled, and easier to defend later.

Executive overview
Security and compliance brief

Risk becomes visible earlier

Approvals can become explicit

Evidence stays reviewable later

WHAT IT IS

PalmerAI is a governance layer for document-heavy and approval-sensitive AI workflows. It gives teams a governed intake path before risky AI action continues, makes approvals explicit when needed, and keeps decision evidence reviewable later.

Controlled path: requests and documents are checked before risky AI action continues.

Approval point: higher-risk cases can become explicit instead of informal.

Reviewable outcome: the durable story stays easier to defend later.

HOW IT WORKS

1. Intake: the workflow enters a governed path before model-side action.

2. Control logic: PalmerAI checks policy context, document state, and review pressure.

3. Decision point: elevated cases can trigger explicit approval instead of silent continuation.

4. Evidence: decision state, timestamps, and policy outcome remain reviewable later.

WHAT CHANGES IN PRACTICE

Before model-side action

Requests and documents can be checked before they continue.

When risk rises

Approvals can become explicit instead of informal workarounds.

When questions come later

Decision evidence stays reviewable instead of reconstructed from raw logs.

Across teams and accounts

Oversight can stay structured even when delivery spans different users or partner-led engagements.

HOW TEAMS USUALLY START

Posture Review: map the workflow, document boundary, approval pressure, and evidence requirement.

Pilot: prove one real workflow with a clear control objective.

Managed Governance: expand only after the operating rhythm already works.

COMMERCIAL OUTLINE

Posture Review / Planning Sprint: EUR 2,500

Pilot: EUR 5,900

Managed Governance: from EUR 1,800 / month

Partner-led delivery: supported where a partner adds advisory and delivery scope around the customer engagement.

CURRENT BOUNDED SUPPORT

- Controlled intake before model-side action
- Documents do not flow upstream by default
- Approval-aware states and reviewable evidence metadata
- Deterministic OCR for governed images and bounded document cases

NOT CLAIMED BY DEFAULT

- Long-term raw-document retention as the default model
- Universal OCR across arbitrary inputs
- A full enterprise DLP replacement
- Unlimited arbitrary file types or document volumes

START WITH ONE WORKFLOW YOU ACTUALLY NEED TO CONTROL

Use a posture review first when the workflow, document boundary, or approval pressure is still unclear.

Use a pilot next when one workflow is already known and you need proof that the control model holds in practice.

Expand later only after the evidence, operating rhythm, and support expectations are already clear.

PRIMARY NEXT STEP

Book a Posture Review when the workflow, document boundary, or approval pressure still needs to be mapped.

See full pricing if one document-heavy or approval-sensitive workflow is already known and you need the commercial path.

Open Evidence Pack Sample to see what a reviewable evidence outcome looks like later.
